

## Virtual Tour Script: HNS and Rogers Hall

**HNS:** This is our Health and Natural Science building! It's one of my favorite buildings on campus because it is mostly glass and full of plants and it's also where you can see some of the best views of campus and the mountains! I spent a lot of time in HNS last year because that is where all my anatomy classes were! This building houses most of the science programs like nursing, biology, ecology, and our Doctor of Physical Therapy program! If you are interested in anything in the medical field, you will have at least one class in this building. I highly recommend checking out HNS if you are interested because I think that it is one of the prettiest places to be on campus!
